

# ONE DEX PLATFORM

July 19th 2019

V1.0

## ONE DEX : Multi Chain Decentralized Exchange

### Abstract

One DEX is a multi-blockchain exchange and Semi-decentralized hedging on Ethereum, NEO, EOS and Tron blockchains (it is possible to add others popular blockchain like wave, stellar, binance chain,zilliqa..)

The main goal of Onedex is to create a DEX with high liquidity, high trading speed, user-friendly interface and optimal security.

ODEX allows users to trade a large family of tokens using their wallet continuously without waiting for transactions to be completed, complete several orders at once and immediately cancel orders without gas costs.

It will first be launched on the Ethereum blockchain (ERC20) , then we will add the other blockchains.

### PROBLEMS WITH CENTRALIZED EXCHANGE

#### 1. Security

Over \$1 billion worth of crypto assets have been hacked from centralized exchanges in 2018 alone

#### 2. Privacy

KYC requirement

**IN PROGRESS**

- 
4. CONTROL OF FUNDS
  5. Listing fees
  6. Withdrawal

## **PROBLEMS WITH EXISTING DECENTRALIZED EXCHANGES**

1. Liquidity
2. Trading Volume
3. Fiat Option
4. Popularity
5. Transaction time
6. Trading interface

## **OneDex Solution**

## **ODEX Token (utility token)**

## **RoadMap**

## **Marketing and sales strategy**

## **Team**

**WORK IN PROGRESS**
